

HDG.Wiki Implementation Plan

Mission statement

This website is to be driven by an open, collaborative, community focused approach. It should attempt to cast a wide net and bring as many community members into the fold as possible. This is to be accomplished by including as many opportunities as possible to highlight the creative endeavours of our community: Sub-pages and glossaries for all the major areas (species, worlds and locations, technology, xenodrugs, etc.), opinion pieces, a diverse array of pull quotes, and a community story hub.

Methodology

Descriptive Resource

Articles should emphasize being descriptive of the setting as it is, not prescriptive on what it should become. That is to say, *where there is lore available already*, the favored approach should be to use stories as references for articles instead of creating lore solely inside articles for future use in stories. This is not a moratorium on original article world-building, but about high level focus.

Passion over priority

This is a volunteer driven, kinky plant smut wiki. Not the nuclear codes! If a prospective contributor is passionate about a topic, the enthusiasm should be fostered and encouraged. While the next steps and roadmap outlined below offer some priorities, articles written out of passion and excitement should always be encouraged and uplifted. (Example: If an article for phytotoxin is listed as a priority topic, but an

author feels enthusiastic about a Class-A deep dive, that enthusiasm should be encouraged and the article published without delay.)

By Community, For Community

As a living, editable, creative resource, barriers for contribution should be minimal. As outlined in the team procedures, non-substantive article edits and sub-articles should be implemented at the discretion of the passionate authors and collaborators who have authored those articles or changes. The appropriate bar to publish an improvement to a community resource should involve only three individuals: Someone who was passionate enough to create it, someone else who was interested enough to give it a thumbs up or help them upload it, and a single reader who will benefit from its existence. With a living resource, perfection is the enemy of progress.

Community Driven Structure

Community Story Hub

Replacing the existing foundational works page, the community story hub is to be a landing page for finding and curating stories.

Proposed Features:

- Several lists of stories that provide exemplary examples of core features of the setting
- Art of a large tree and florets and Affini (optional - not MVP)
- Links to community story collections on AO3 and writing jams
- Links to sub articles on writing, axioms, and other helpful things, all in one place
- Sub-articles for various themes that are important to the setting
- A list of 3-10 stories that exemplify the category, with blurbs
- Links to relevant open community collections and writing jams

- Art relevant to the category (optional - not MVP)

Setting Landing Pages

Proposed default structure for the landing pages for key aspects of the setting, designed to emphasize and encourage community contributions. Each implementation will be flexible for that area of the setting. (Example: The page will look different for xenodrugs, which are driven by the canon classes, than species, which are driven by ongoing community contributions.)

Template

SECTION NAME - Heading One

Paragraph describing the relevant area.

GLOSSARY- Heading Two

Paragraph explaining any critical information to the list, such as how it is templated.

SUB ITEM - Heading Three - if the entry has a dedicated page, this is a link.

Critical Data - bold text.

1-2 paragraphs. In some cases, an <aside> block with art, if any is available will go here.

Italicized credit to creator if there is one, and a link to a relevant citation story of their choice.

Some Quick Examples:

Ch'thal (*Sophont Species Glossary*)

Messier 110 | ~800 years BT

Fungal xenosophonts resembling Terran sloths, but with large, spectacular mycelial crests running down their backs. They have a vast multitude of sexes like Terran slime molds, and when they find a mate they bond for life. They communicate emotional information via

spores, which frequently end up having an effect on other xenosophonts as well.

Created by RocketMermaid23. Appear in [Irregular Orbits](#).

Class-M (*Xenodrug classes page*)

Inhibits movement and thoughts, whether as a paralytic or through the inducement of stillness and peace. Commonly used for dollplay or by sophonts who identify as dolls.

Recommended story: [Mainspring](#) by Kanagen

Hablis-9 (*Worlds and Locations page*)

Accord Moon | Former Mining Colony | Domesticated 2551

A former mining colony turned city state, Hablis-9 is one of several moons orbiting the gas giant Orphan-3, near the rim of the Terran Accord.

Created by SlyLittlePrincess. Appears in [Personhood](#).

[Rinans](#) (*Sophont Species Glossary*)

Milky Way, inside the Terran Accord | Domesticated 2553

A small nocturnal mammalian xenospecies that bears a resemblance to a terran rodent. Naturally inquisitive to a fault, seemingly almost fearless, with little concept of personal safety; this leads to their technology often being experimental and dangerous, in the name of science. Rinans are the only xenospecies that the Terran Accord had encountered prior to the affini.

Maintained by the Lorets.

EXTENDED GLOSSARY- Heading Two

Sublisting bullets or sentences for community created items that are mentioned in passing. This can be handled in a few different formats:

-Example 1(bold): Description of something that has a clear, known author and source. By Author, [Story](link)

-Example 2(bold): Something so widespread or general it cannot be attributed easily. A good example appears in [Story](link) by Author.

Some Quick Examples:

- **Rudon:** A sexually trimorphic species of reptilians with a rich artistic history that had technologically plateaued before industrialization when the Affini arrived. By SlyLittlePrincess, [From Pawn To Princess](#). (*Extended Xenosophont Glossary*)
- **Durataxin:** A widely used Affini-targeted drug, with effects very similar to alcohol. By Fluxom, [Abscission](#). (*Named Drug Glossary*)
- **Printable Clothes:** Specialized compilers that can make clothing in place on a body that is too complex or difficult a material to conveniently put on normally, such as a latex bodysuit in [Lacuna](#) by Kanagen. (*Affini Technologies Page*)

Roadmap

The roadmap dictates a set of suggested priorities for the website - pages that it is recommended receive focus to achieve parity with the prior website and enact the vision of a community focused resource.

Critical Infrastructure

It must be possible to navigate to all pages only by clicking links and without using the search bar. That leaves the following pages as key priorities, which should be fast tracked in a minimal viable state that allows for the creation of navigation and traversal trees, even if they are just bullet points.

Pages that provide a location for community sourced content are labeled community content hub.

- ☒ ~~The Affini Compact~~
 - [] Affini Technology (community content hub)
- ☐ The Terran Accord
 - [] TCN
 - [] Factions/Peoples or similar title (community content hub)
- ☐ Sophont Species Glossary (community content hub)
- ☐ Locations and Worlds (community content hub)
 - [] *(It may make sense to separate accord and compact locations and have two pages - out of scope)*
- ☐ Xenodrug Classes
 - [] Named Xenodrug Glossary (community content hub)
- ☐ Community Story Hub Landing Page

Future proposals (out of scope)

The following are potential concepts, not adopted in this implementation plan but included as potential improvements to the project structure or website down the line.

- A feature by which certain parts of the website are randomized per-day using the current date as a seed, so that new quotes from new stories can always be added without replacing anything old, and everyone will always see the same page at any given time.
 - This would be particularly beneficial for things like the featured story on a xenodrug class, where there will be many valid options to choose from.
- A procedure to be developed post-launch to determine how individuals who are not in the same authority as guide workers may submit content. A possible candidate is the formation of breakout teams that bring one or two experts and the submitting user into a team that work together. Using the existing ticket system may be possible.
